

## Thomson Reuters Reports Full-Year and Fourth-Quarter 2013 Results

**NEW YORK, February 12, 2014** – Thomson Reuters (TSX / NYSE: TRI) today reported results for the full year and fourth quarter ended December 31, 2013. The company achieved its 2013 Outlook, and today provided a business outlook for 2014.<sup>1</sup> Declines in earnings and profitability in both periods reflected previously announced charges (described below).

- Revenues grew 2% for the full year and 1% for the fourth quarter, before currency
- Including a \$260 million charge in the fourth quarter, adjusted EBITDA was down 7% for the full year and down 32% for the fourth quarter
- Including a \$275 million charge in the fourth quarter, underlying operating profit was down 15% for the full year and down 50% for the fourth quarter
- Full-year adjusted EPS was \$1.54 vs. \$1.89 in 2012 and fourth-quarter adjusted EPS was \$0.21 vs. \$0.54 in the prior-year period
- Excluding the fourth-quarter charges, adjusted EPS was \$1.83 for the full year and \$0.49 for the quarter
- The Board approved a \$0.02 annual dividend increase to \$1.32 per share; represents the 21<sup>st</sup> consecutive annual increase in the company's dividend

"I am pleased that we were able to deliver on our full-year expectations, despite a tougher than expected external environment in the fourth quarter," said James C. Smith, chief executive officer of Thomson Reuters.

"More importantly, we took significant strides to position the company to thrive in future years. Our transformation initiatives are taking hold, costs are coming out and innovation is coming forth. Specifically, the charge we announced for 2013-14 is just one necessary element of the changes we have put in place to enable us to drive growth across the enterprise," said Mr. Smith.

"While the external headwinds were stronger than anticipated at year-end, particularly in Europe and the emerging markets, I am pleased with the progress we continued to make inside the company and with our customers. I am confident this progress will accelerate in 2014."

Footnotes

- (1) Prior-period amounts have been revised to reflect the retrospective application of amendments to IAS 19, *Employee Benefits* and the adoption of IFRS 11, *Joint Arrangements*.
- (2) Revenues from ongoing businesses are revenues from reportable segments and Corporate & Other (which includes Reuters News) less eliminations. Other Businesses (see note (3) below) are excluded.
- (3) Other Businesses are businesses that have been or are expected to be exited through sale or closure that did not qualify for discontinued operations classification.

Depreciation and amortization of computer software	-	1	-	11
EBITDA	\$3	\$25	\$64	\$148

- (4) Thomson Reuters defines adjusted EBITDA as underlying operating profit excluding the related depreciation and amortization of computer software. Adjusted EBITDA margin is adjusted EBITDA expressed as a percentage of revenues from ongoing businesses.
- (5) Underlying operating profit is operating profit from reportable segments and Corporate & Other (includes Reuters News). Underlying operating profit margin is the underlying operating profit expressed as a percentage of revenues from ongoing businesses.
- (6) Adjusted earnings and adjusted earnings per share include dividends declared on preference shares and amortization of the tax charges associated with the consolidation of technology and content assets but exclude the pre-tax impacts of amortization of other identifiable intangible assets as well as the post-tax impacts of fair value adjustments, other operating (gains) and losses, certain impairment charges, the results of Other Businesses (see note (3) above), other finance (income) costs, Thomson Reuters share of post-tax (earnings) losses in equity method investments, discontinued operations and other items affecting comparability. Adjusted earnings per share is calculated using diluted weighted-average shares and does not represent actual earnings or loss per share attributable to shareholders.

Because Thomson Reuters reported a net loss from continuing operations under IFRS for the three months ended December 31, 2013, the weighted average number of common shares used for basic and diluted loss per share is the same, as the effect of stock options and other equity incentive awards would reduce the loss per share, and therefore be anti-dilutive. Since our non-IFRS measure "adjusted earnings" is a profit, potential common shares are included, as they lower adjusted EPS and are therefore dilutive.

The following table reconciles IFRS and non-IFRS common share information:

	Three Months Ended December 31, 2013
(weighted average common shares)	
IFRS: Basic and Diluted	825,270,499
Effect of stock options and other equity incentive awards	3,355,232
Non- IFRS	828,625,731

- (7) Adjustment to reflect income taxes based on estimated full-year effective tax rate. Reported earnings or loss for interim periods reflect income taxes based on the estimated effective tax rates of each of the jurisdictions in which Thomson Reuters operates. The adjustment reallocates estimated full-year income taxes between interim periods, but has no effect on full-year income taxes.
- (8) Reflects amortization of the tax charges associated with the consolidation of the ownership and management of technology and content assets. For the non-IFRS measure, the majority of the charges are amortized over seven years, the period over which the tax is expected to be paid.
- (9) Free cash flow is net cash provided by operating activities less capital expenditures, other investing activities and dividends paid on the company's preference shares. Other Businesses (see note (3) above) are also removed to arrive at free cash flow from ongoing businesses.
